Aura Science Team Meeting  
Netherlands, 2005

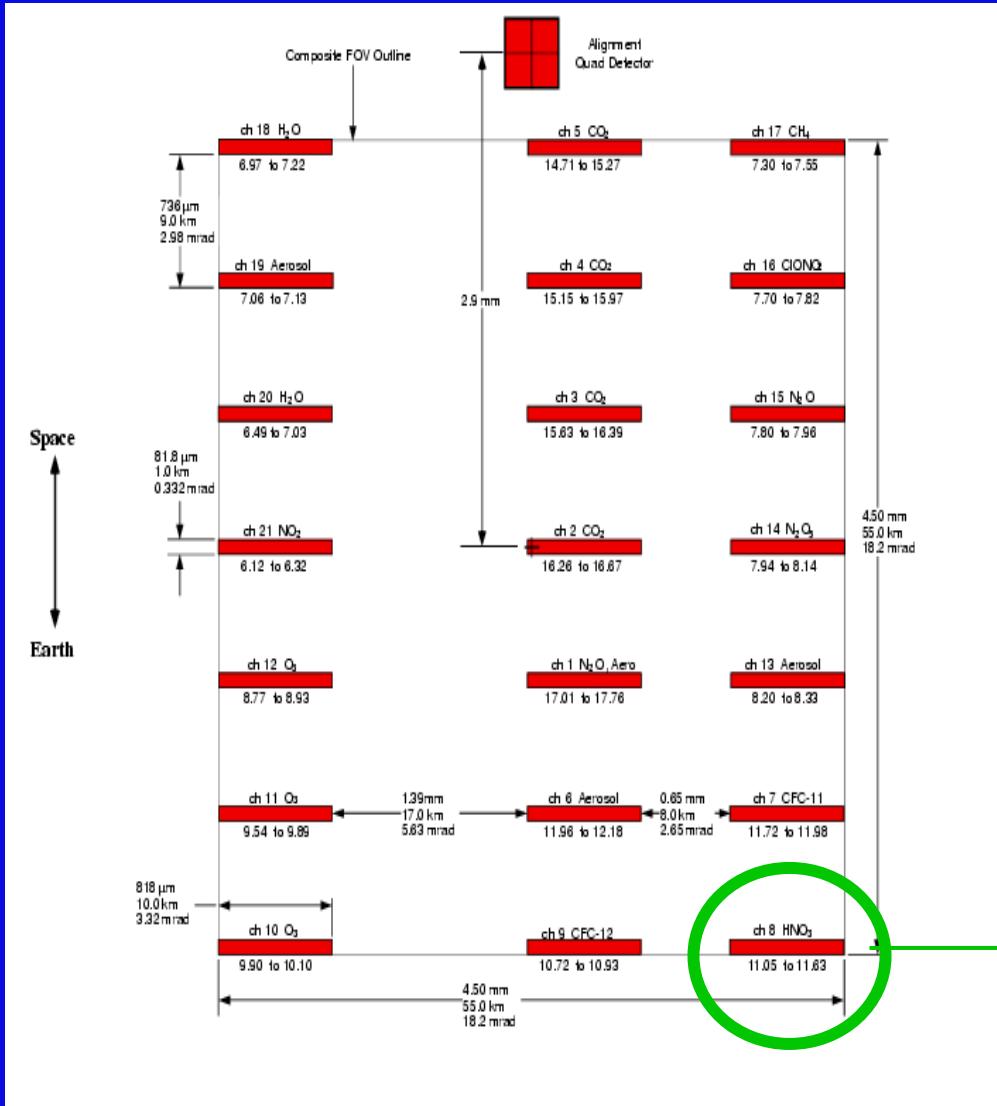

# Limb Radiance Spectra for HIRDLS channels 6-9 for a Tangent Height of 25km

Edwards et al., Appl. Optics, 1995.

HNO<sub>3</sub> has a strong radiance signal in channel 8 between 861-903 cm $^{-1}$

# HIRDLS Field of View Map

**Edge of Obscuration**

**Space**

**Aperture**

**Earth**

**Beam Footprint**

**Obscuration**

HNO<sub>3</sub> Channel 8 position on the detector array is NOT optimal.

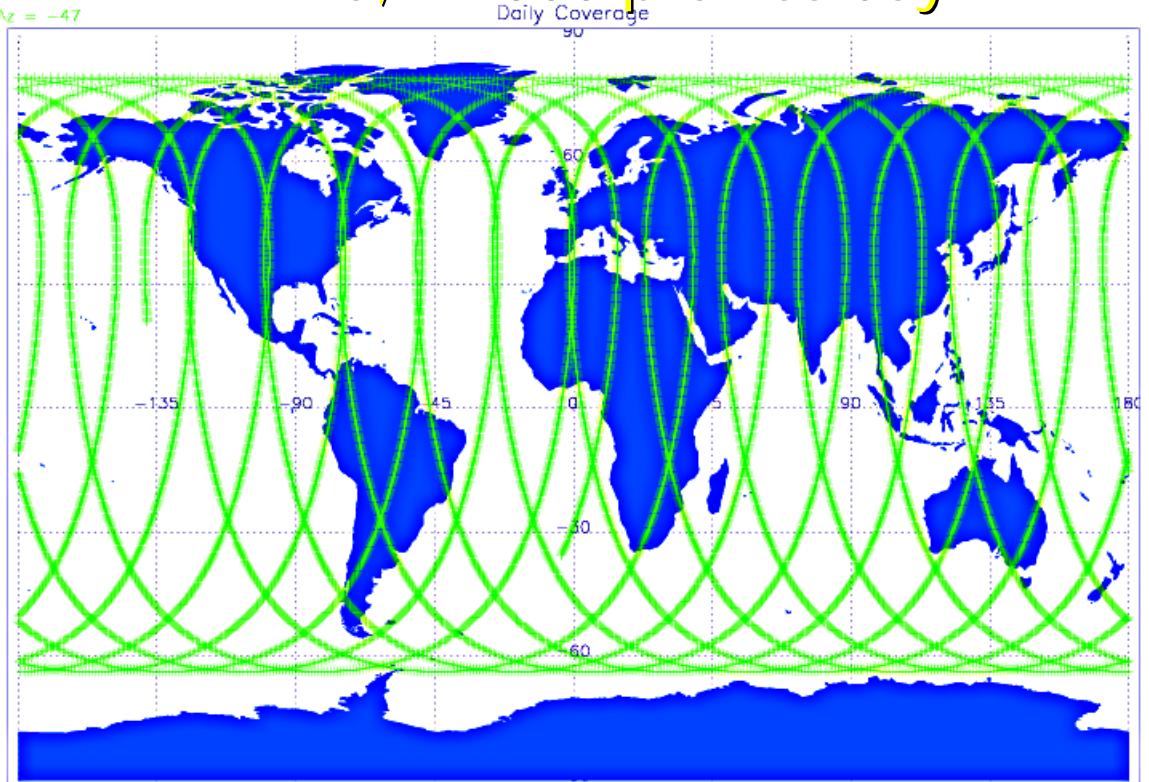

# Presentation Outline

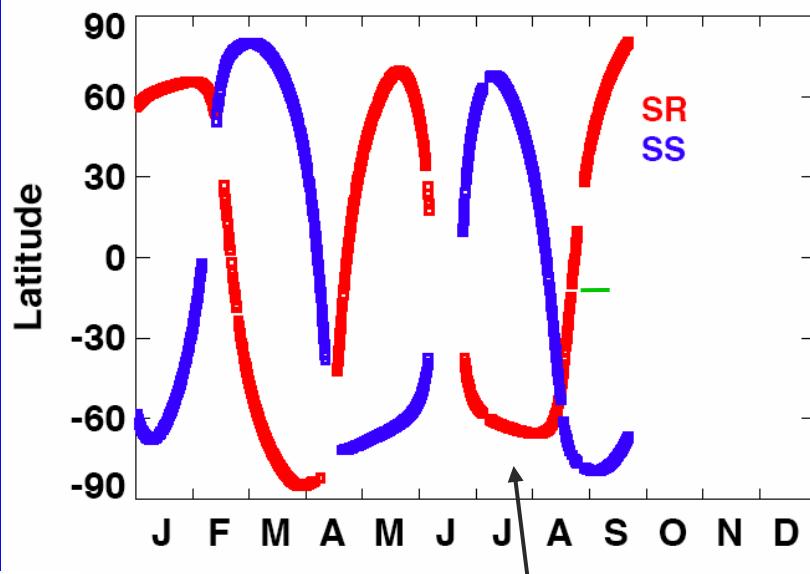

- Profile Comparisons
  - Highlight biases
    - Validate with ACE data
- Global Features
  - Does HIRDLS represent known climatologies?
    - Compare with LIMS and Aura MLS data.
- Cold T's, PSC's
  - Does HIRDLS see NH de-nitrification

# Comparison of orbit tracks between Atmospheric Chemistry Experiment (ACE) and HIRDLS

HIRDLS;  $\sim 7000$  profiles day $^{-1}$

ACE Latitudes in 2005

80°N

30 profiles day $^{-1}$

64°S

# Comparison with Atmospheric Chemistry Experiment (ACE)

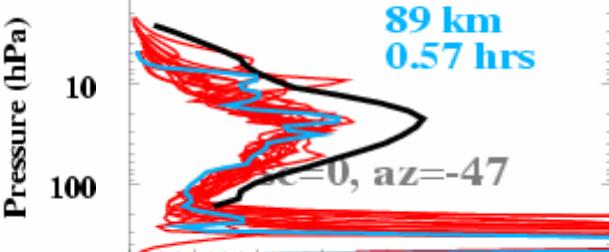

Coincidence criteria: 500 km, 12 hours

The coincidences were as follows (approximate ACE latitudes):

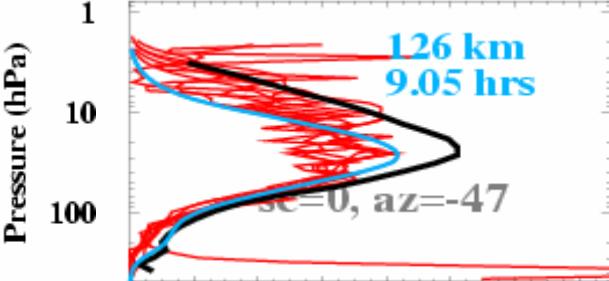

- |              |                        |                       |
|--------------|------------------------|-----------------------|
| 1) 20050127: | 7 coincidences, ~65N,  | 5 coincidences, ~40S  |
| 2) 20050207: | 8 coincidences, ~63N   |                       |
| 3) 20050309: | 14 coincidences, ~79N, | 12 coincidences, ~63S |
| 4) 20050316: | 12 coincidences, ~73N  |                       |
| 5) 20050322: | 9 coincidences, ~65N   |                       |
| 6) 20050511: | 12 coincidences, ~59N, | 14 coincidences, ~66S |
| 7) 20050721: | 13 coincidences, ~59N, | 12 coincidences, ~64S |

For this study we have 103 coincidences total.

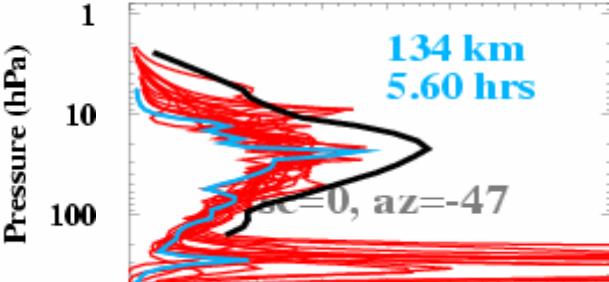

Lat 78.75, Lon 3.020

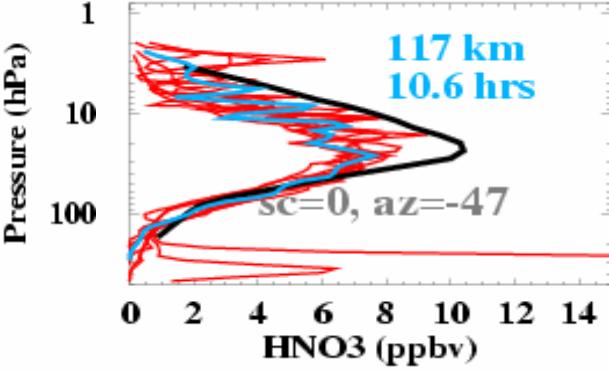

Lat -64.0, Lon 163.1

Lat 78.72, Lon 338.8

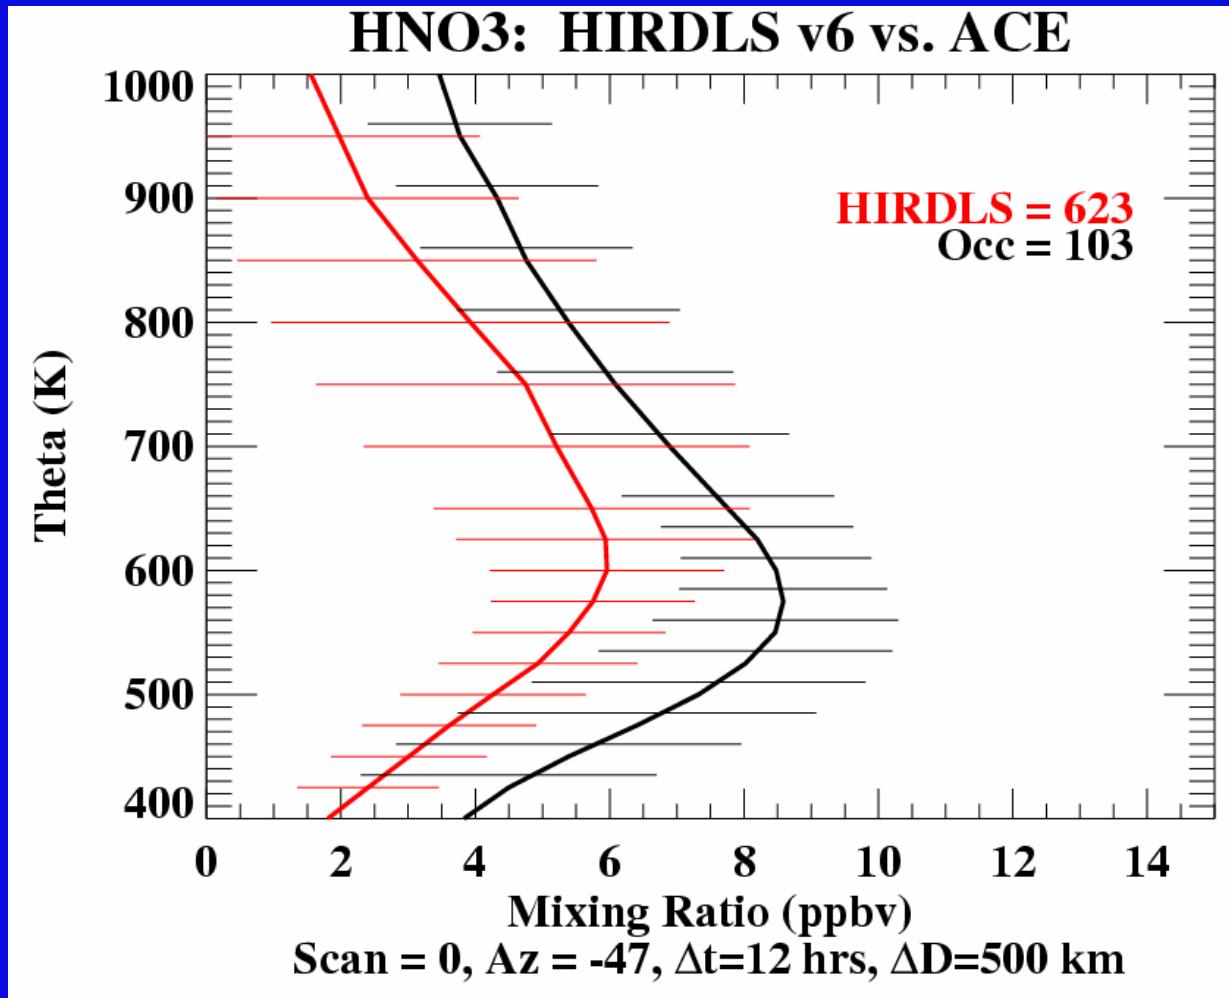

Lat -64.2, Lon 138.7

## Comparison with ACE, March 9, 2005

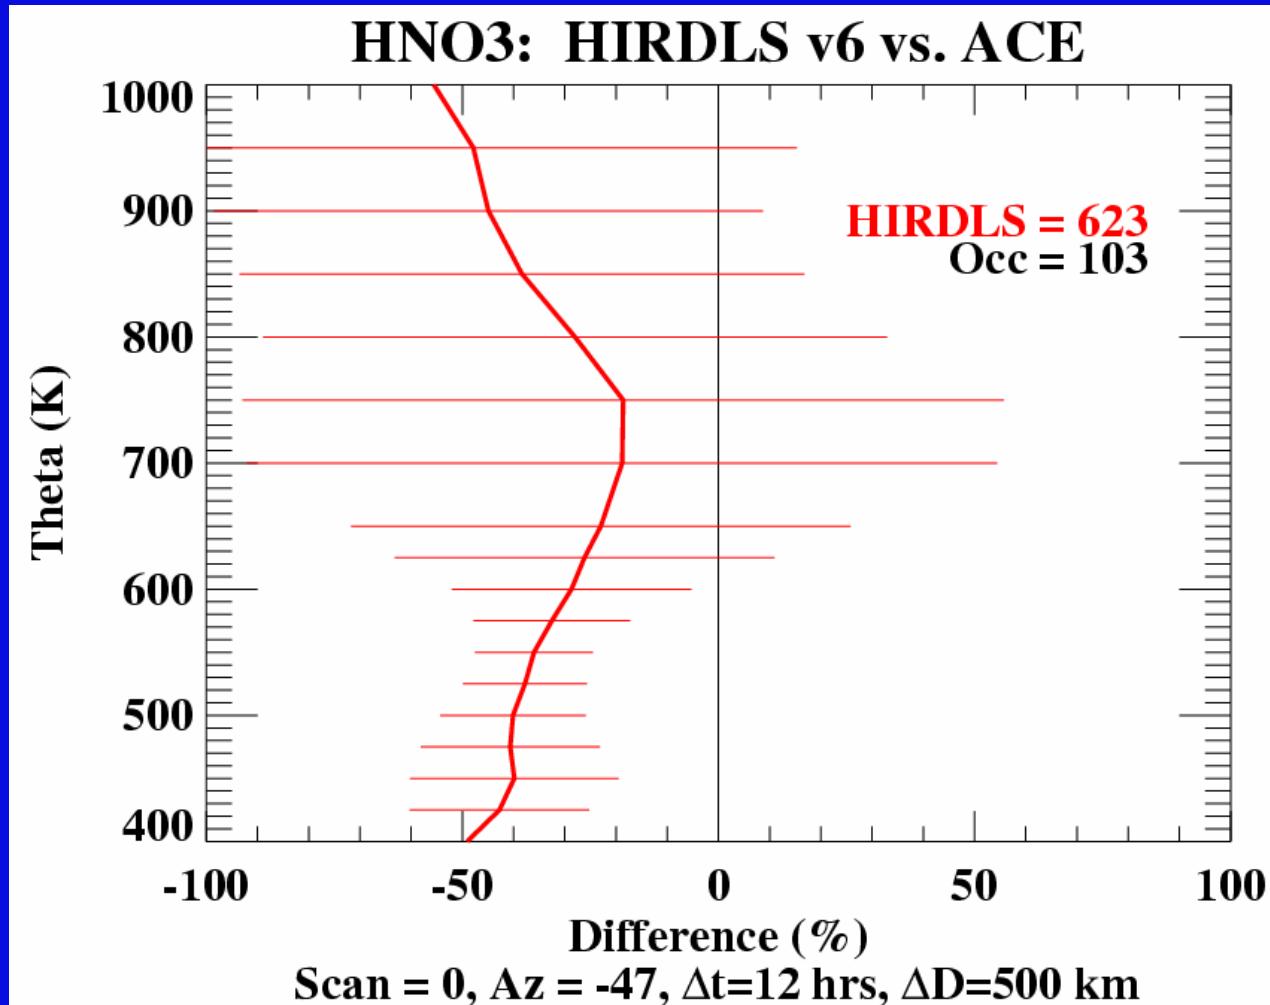

- Red: all profiles within 500km and 12-hours
- Blue: Closest profile to ACE
- Black: ACE profiles

- HIRDLS is biased low relative to ACE.
- Clouds can be seen below 100hPa
- More structure in the “closet profile” relative to ACE.

HIRDLS is biased low relative to ACE by 2-3 ppbv.

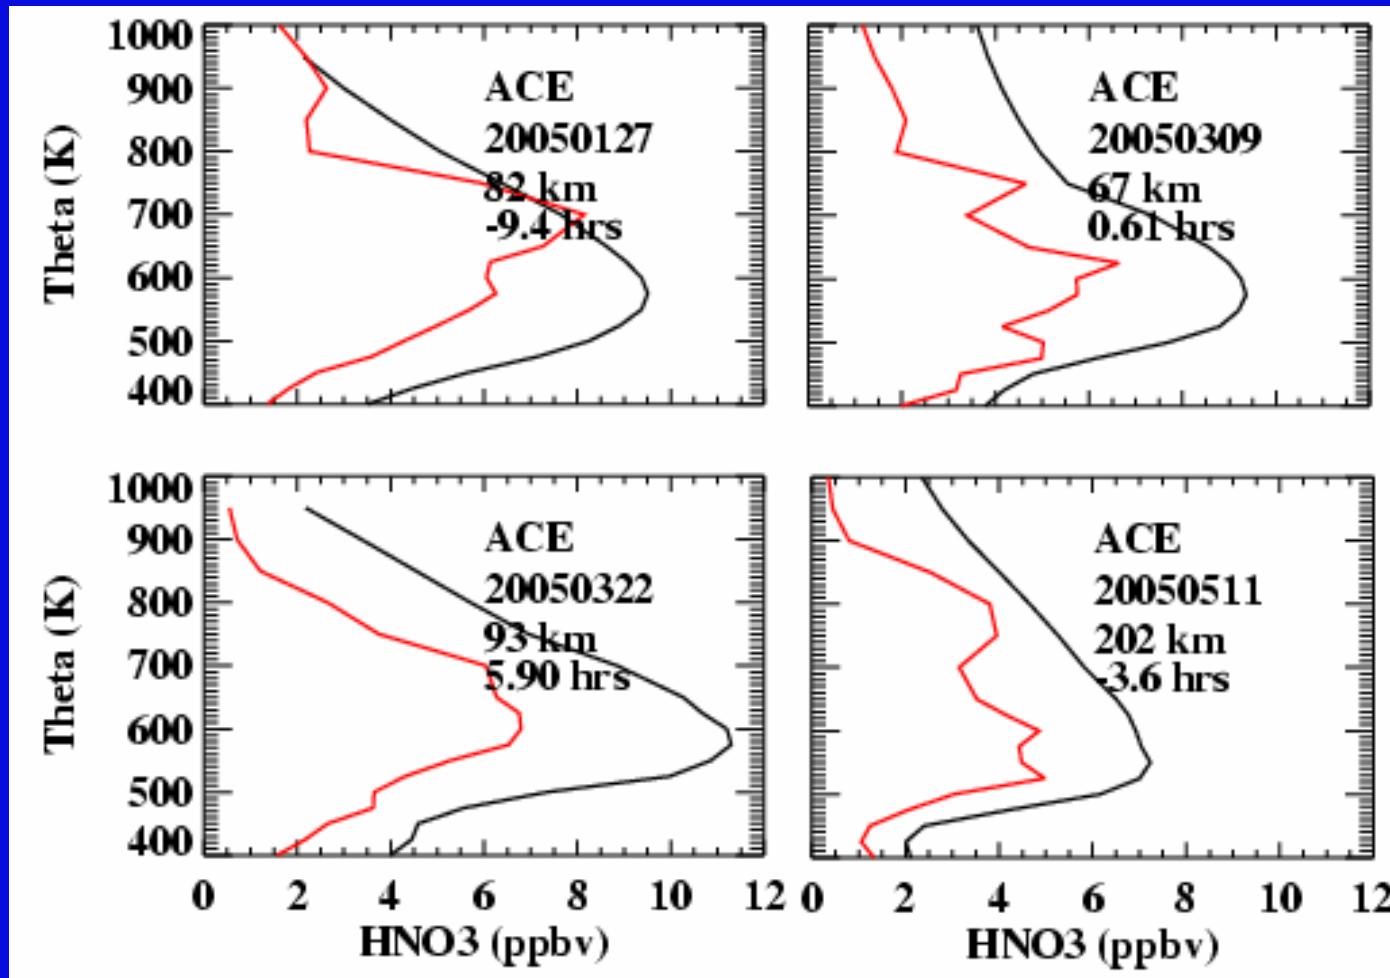

Average HNO<sub>3</sub> profiles from HIRDLS and ACE for coincident measurements on the 7 dates listed previously. Error bars denote 1- $\sigma$  standard deviation of the distributions.

HIRDLS is biased low relative to ACE by 20-50%.

Average differences between HNO<sub>3</sub> profiles from HIRDLS and ACE for coincident measurements on the dates listed on the first slide. Error bars denote 1- $\sigma$  standard deviation of the distributions.

# Structure in HIRDLS is not seen in ACE.

This shows the closest (in space) HIRDLS and ACE coincidences on each of the HIRDLS retrieval dates.

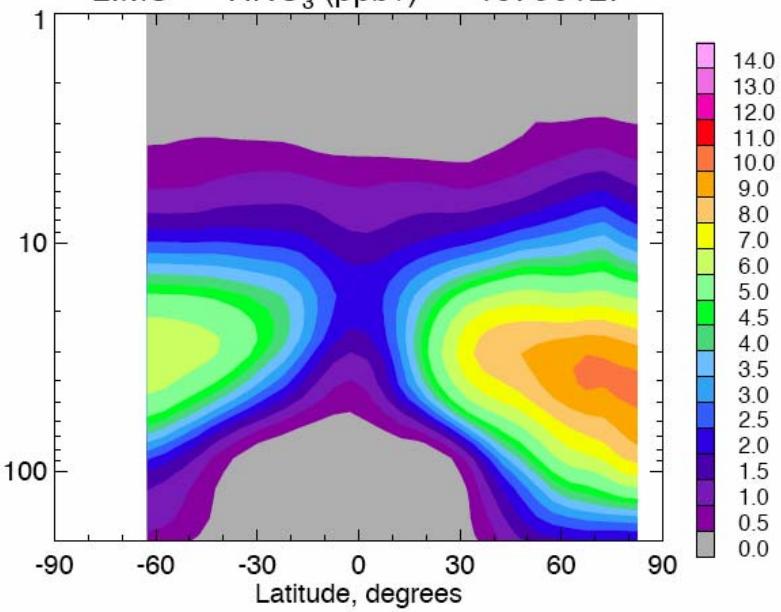

# Presentation Outline

- Profile Comparisons
  - Highlight biases
    - Validate with ACE data
- Global Features
  - Does HIRDLS represent known climatologies?
    - Compare with LIMS and Aura MLS data.
    - Correlative data interpolated to HIRDLS track.
    - Binned: 5° latitude and 20° longitude
- Cold T's, PSC's
  - Does HIRDLS see NH de-nitrification

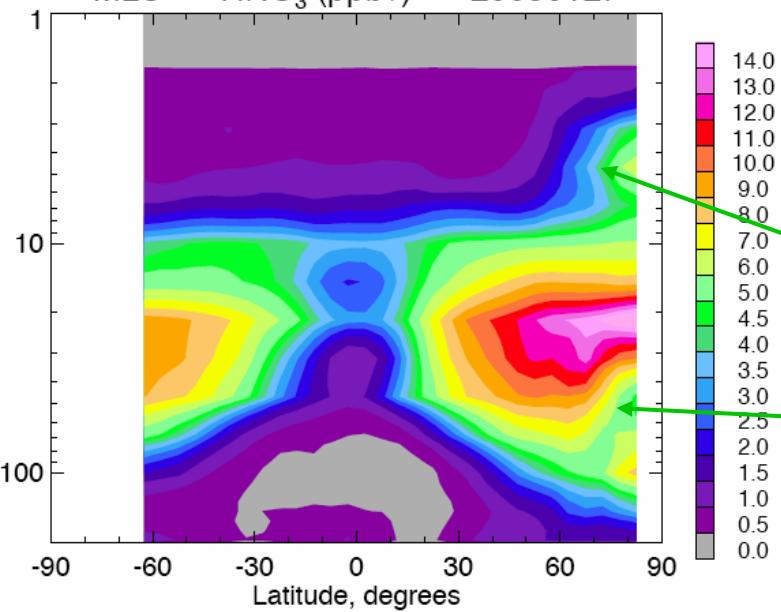

LIMS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 19790127

Pressure, hPa

MLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20050127

Pressure, hPa

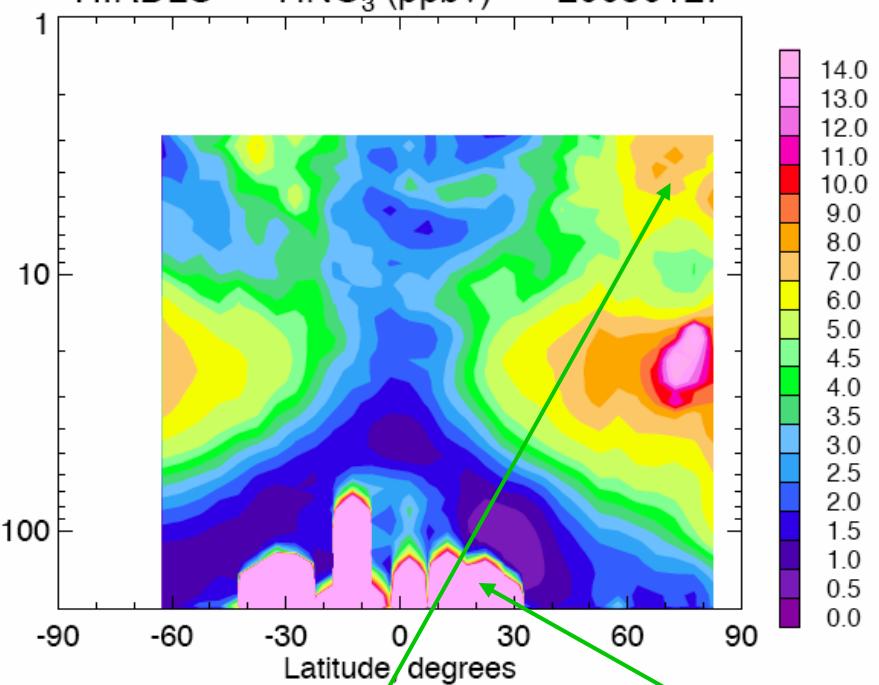

# Global Comparisons Jan 27<sup>th</sup> (1979; 2005)

binned: 5° latitude; 20° longitude

HIRDLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20050127

Pressure, hPa

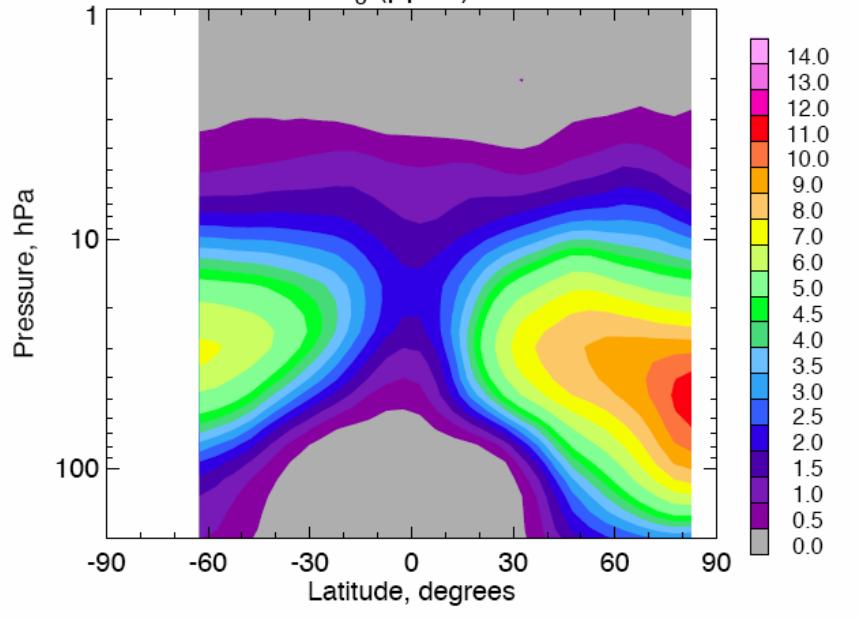

Solar Activity

Clouds

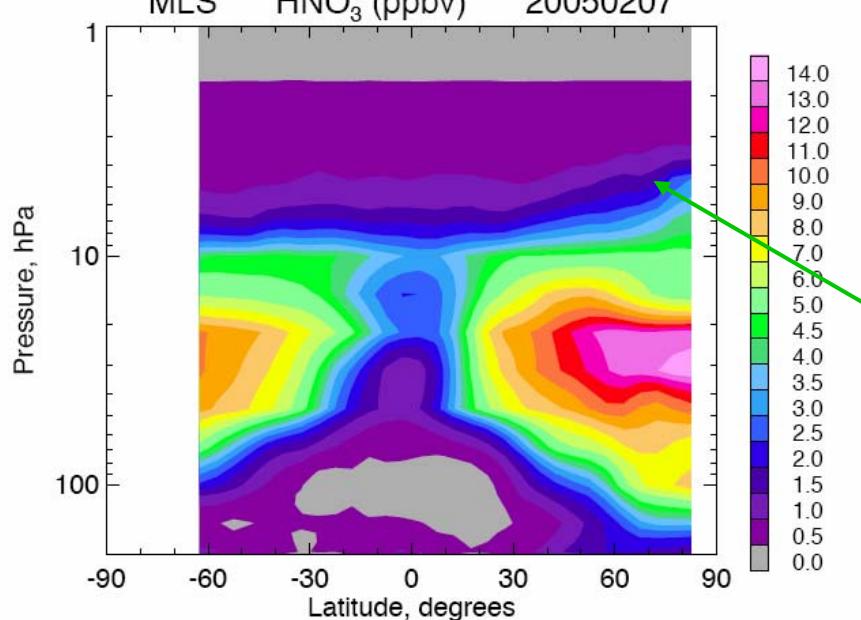

De-NOY in MLS; not in HIRDLS

Correct Winter/Summer Asymmetry represented in HIRDLS (more HNO<sub>3</sub> in NH)

LIMS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 19790207

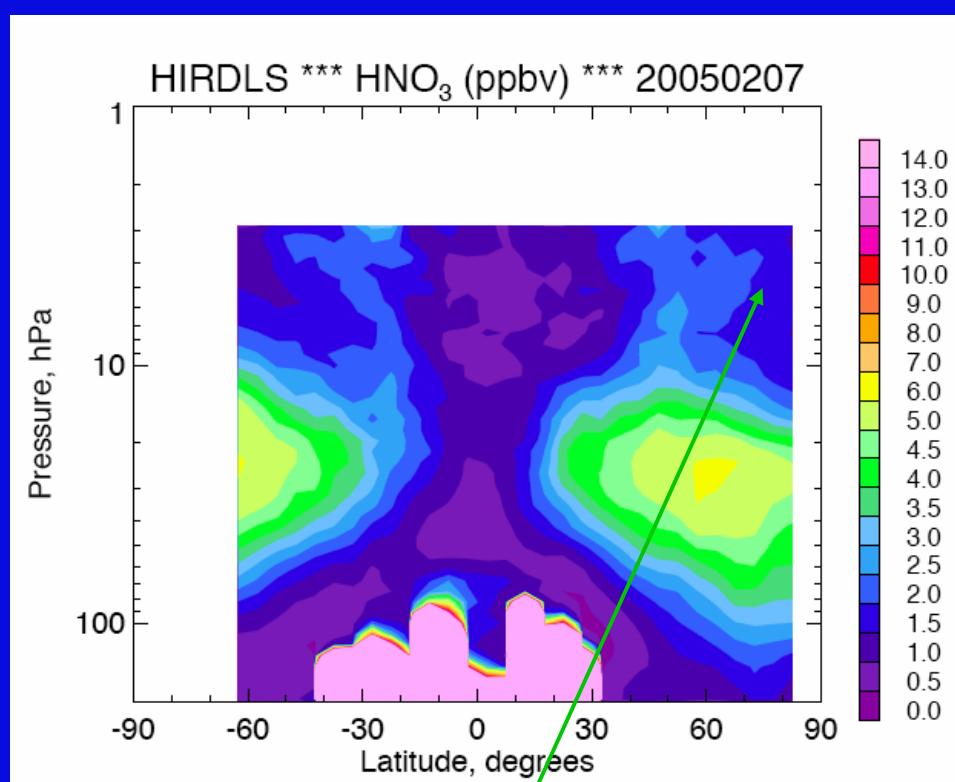

MLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20050207

# Global Comparisons Feb 7<sup>th</sup> (1979; 2005)

binned: 5° latitude; 20° longitude

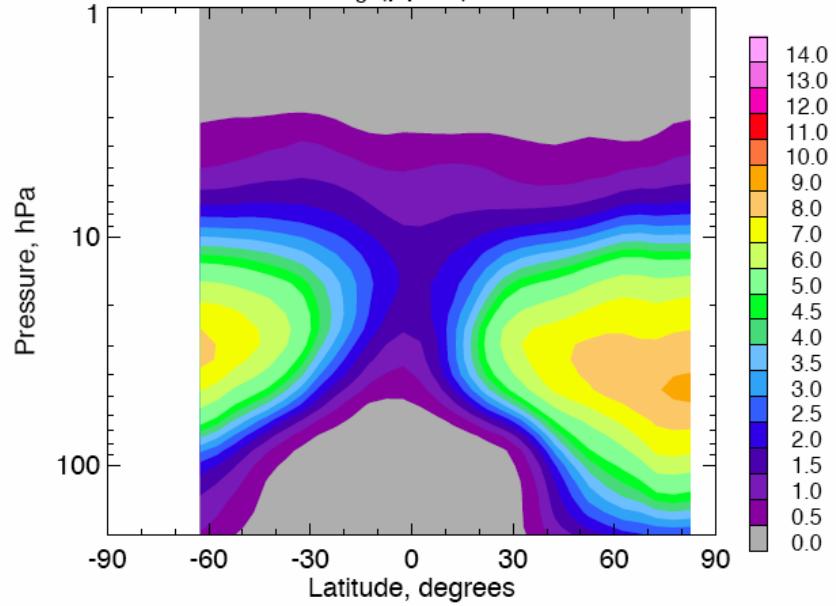

HIRDLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20050207

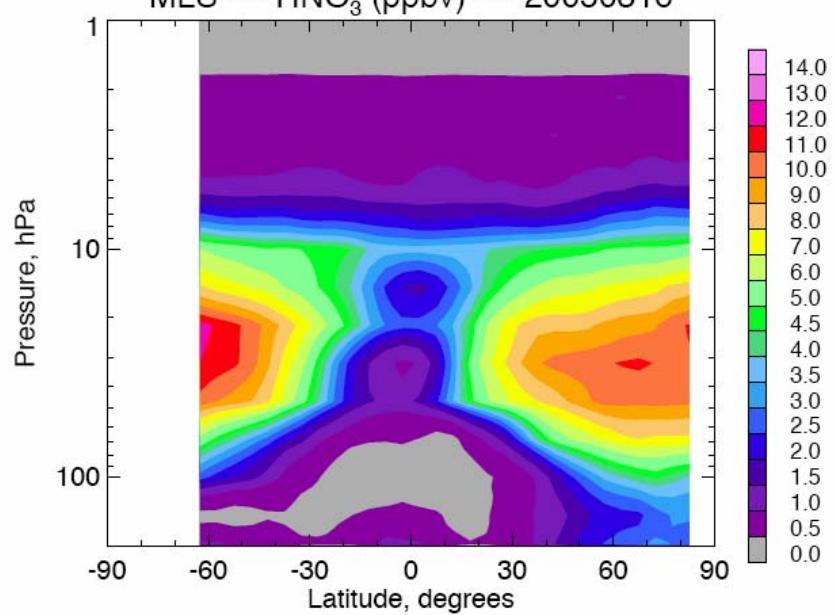

Less Solar Activity Signal

Correct Winter/Summer Asymmetry represented in  
HIRDLS (more HNO<sub>3</sub> in NH)

LIMS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 19790316

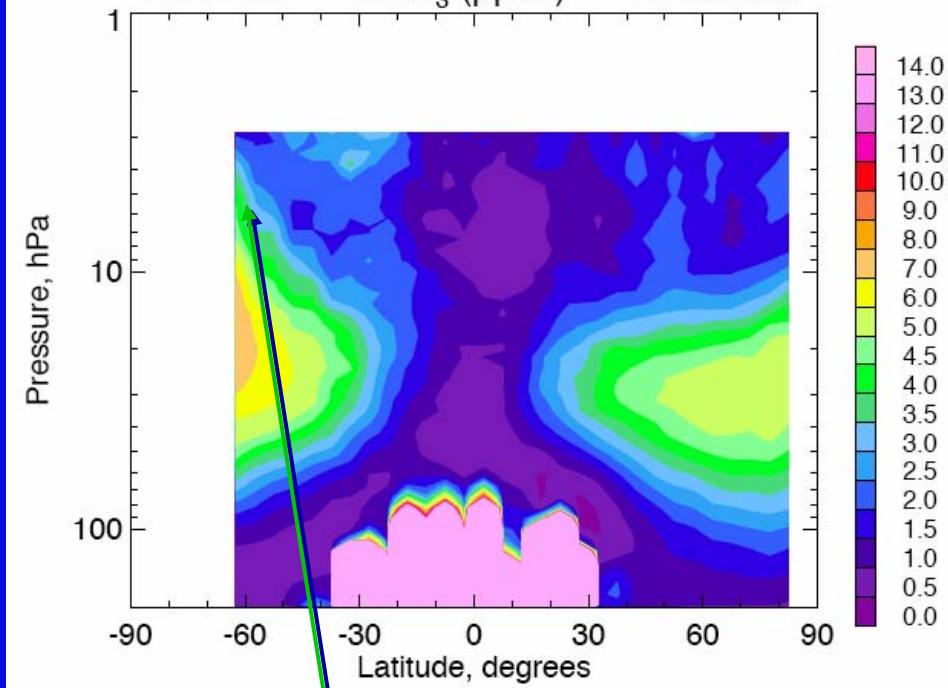

MLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20050316

# Global Comparisons March 16<sup>th</sup> (1979; 2005)

binned: 5° latitude; 20° longitude

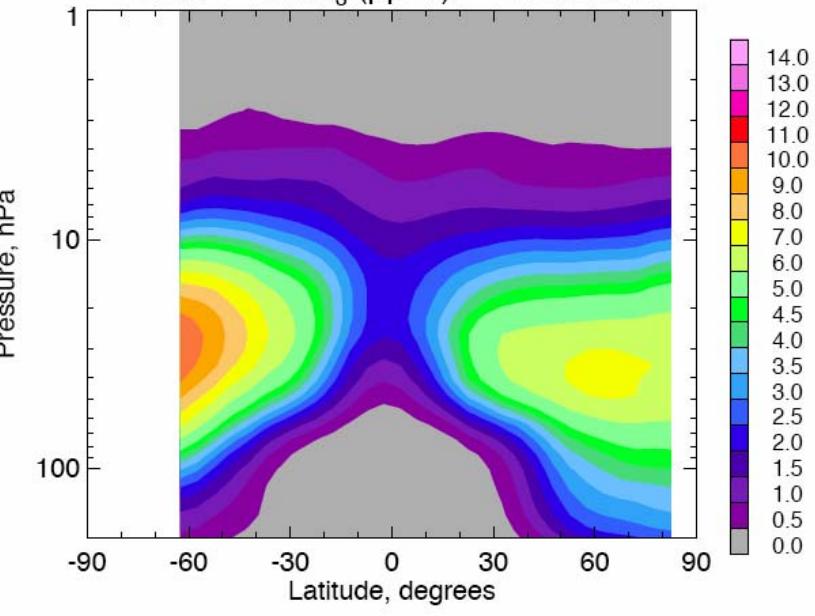

HIRDLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20050316

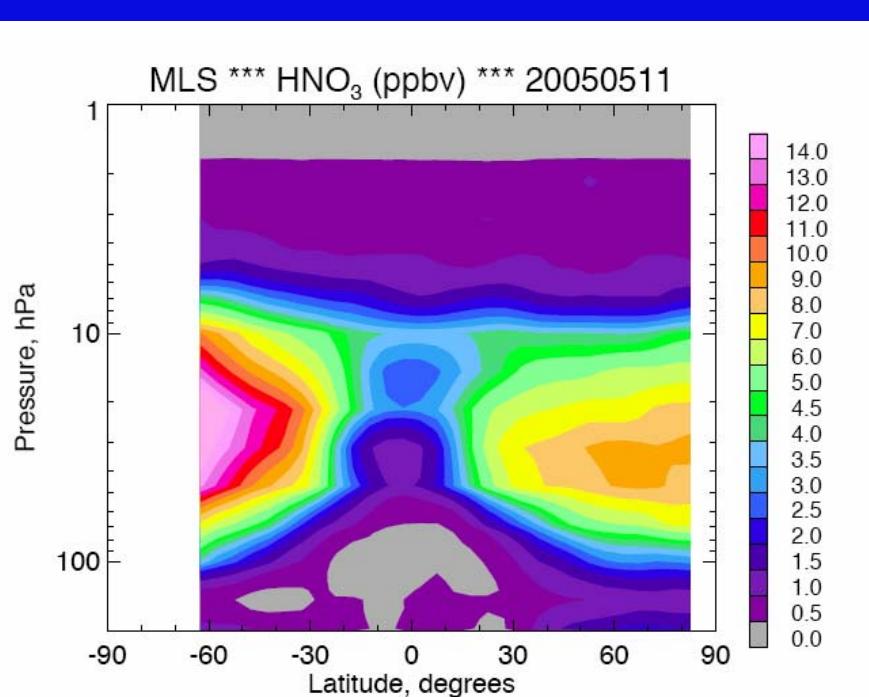

Enhanced HNO<sub>3</sub> not present in MLS

Correct Winter/Summer Asymmetry represented in  
HIRDLS (approx. equal HNO<sub>3</sub> in NH and SH)

LIMS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 19790511

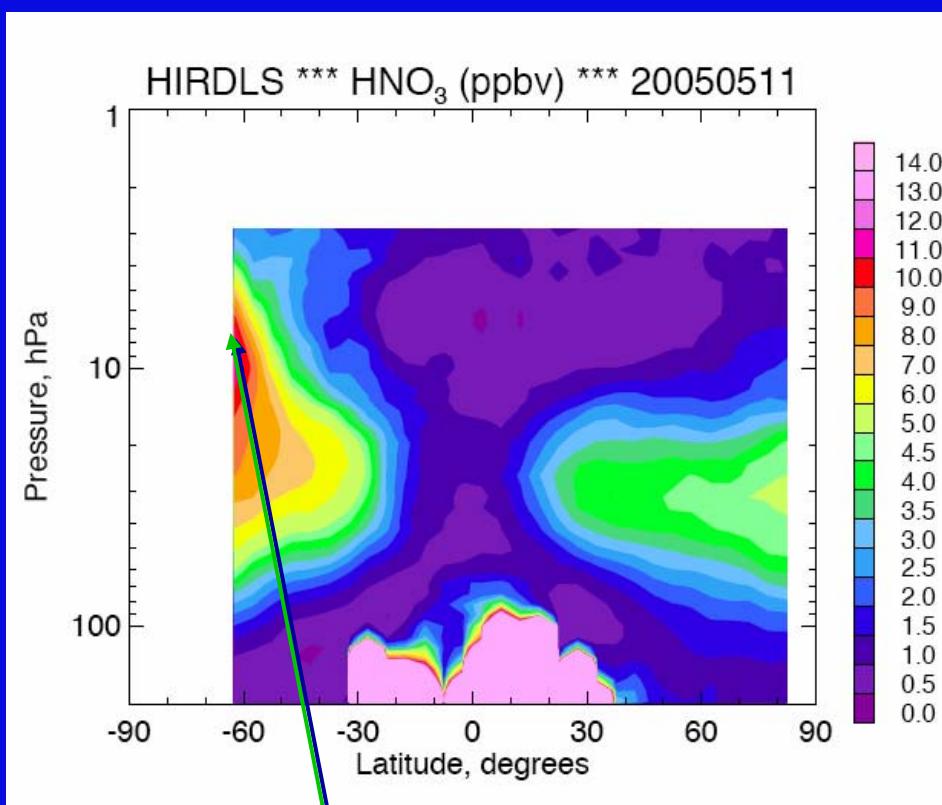

MLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20050511

# Global Comparisons May 11th (1979; 2005)

binned: 5° latitude; 20° longitude

HIRDLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20050511

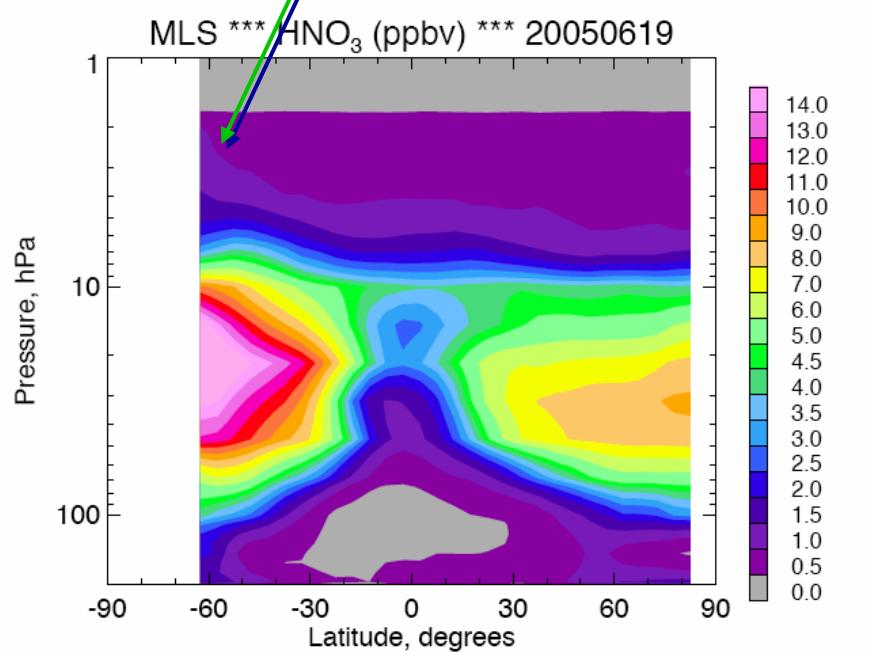

Enhanced HNO<sub>3</sub> not present in MLS

Correct Winter/Summer Asymmetry represented in  
HIRDLS (more HNO<sub>3</sub> in SH)

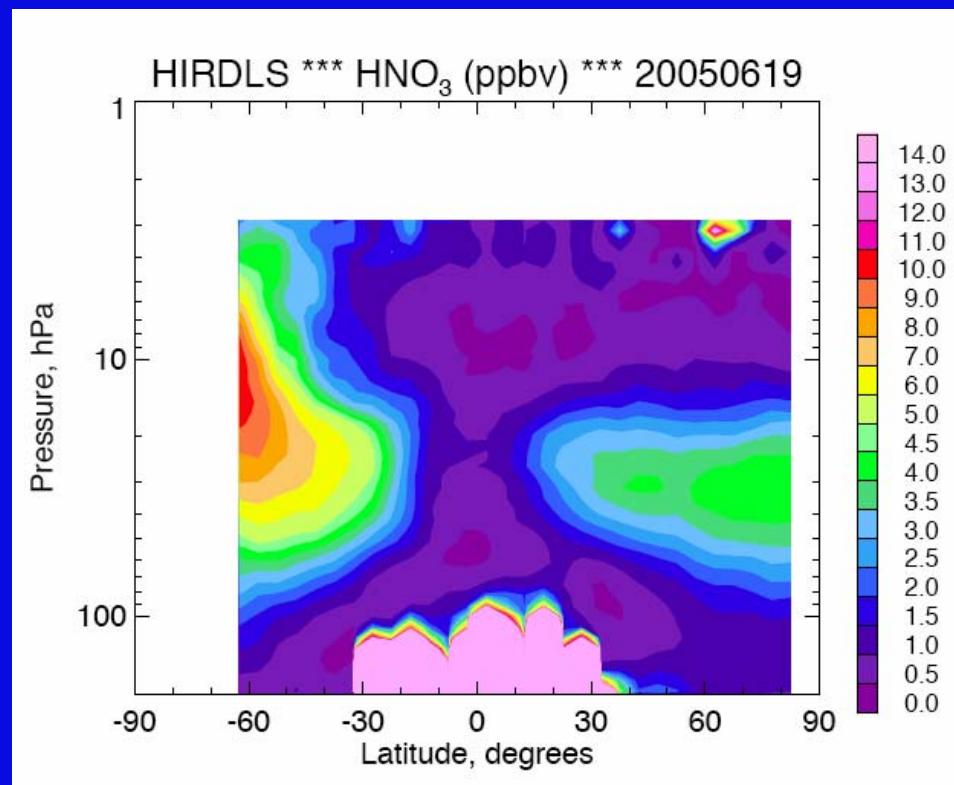

# Global Comparisons

## June 19<sup>th</sup> (2005)

Enhanced HNO<sub>3</sub> beginning to show up in MLS

binned: 5° latitude; 20° longitude

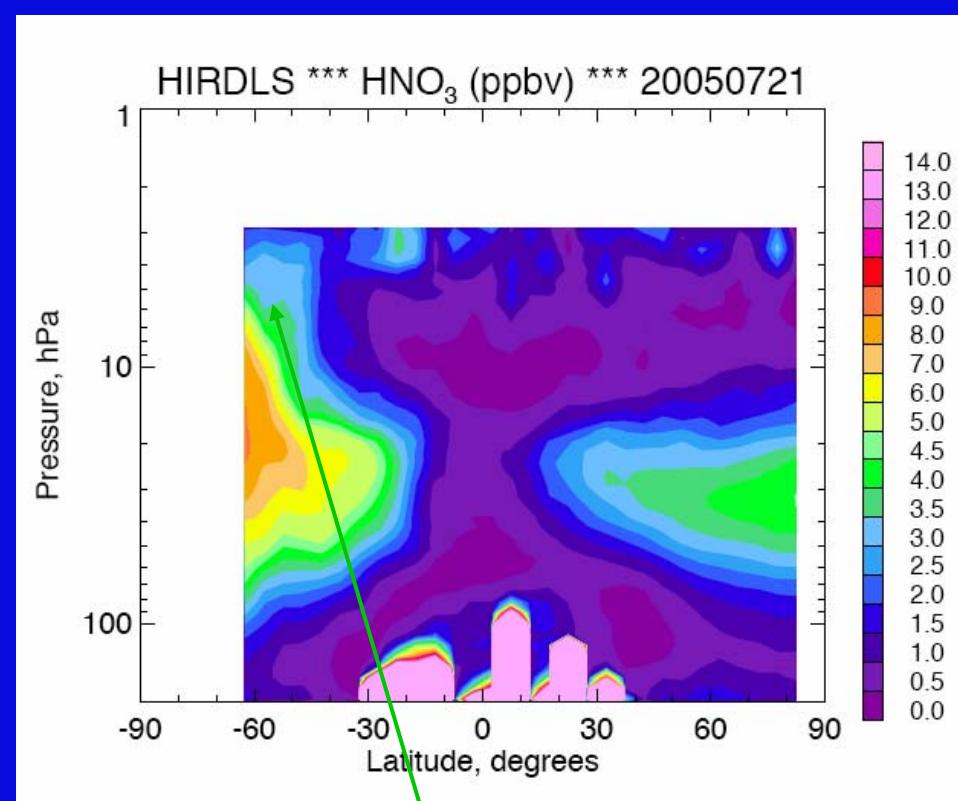

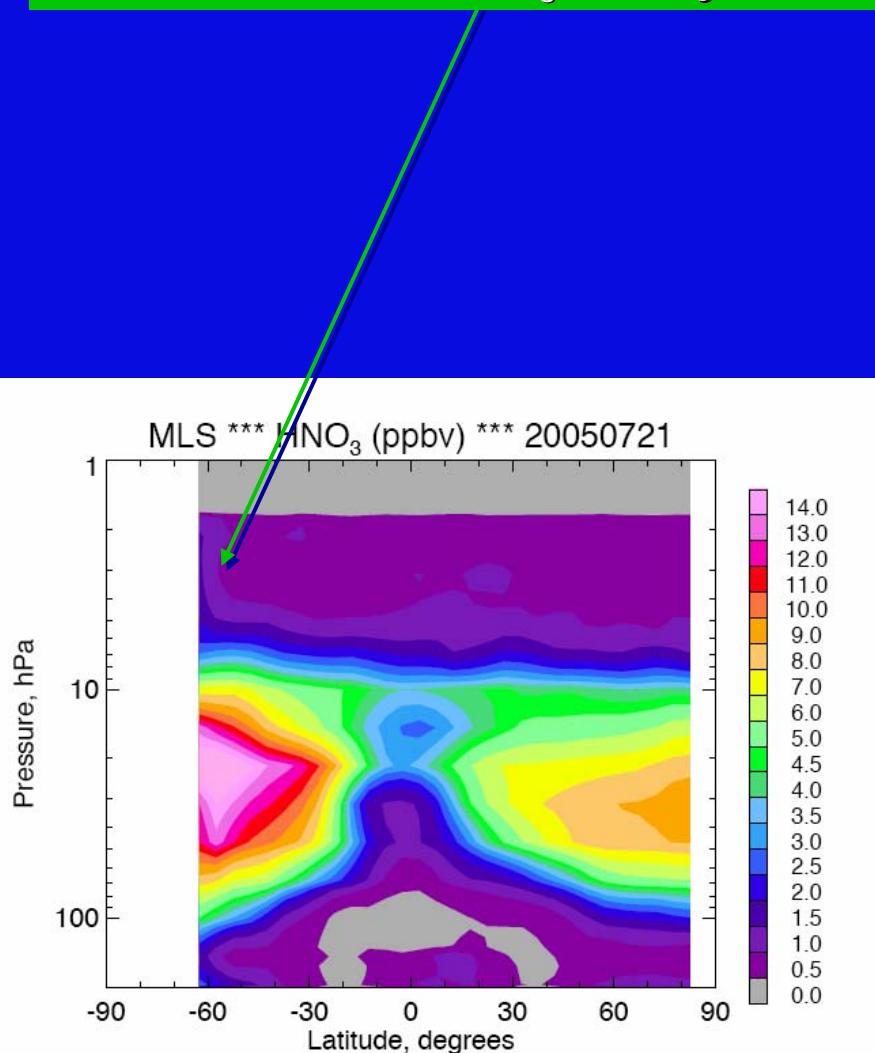

Correct Winter/Summer Asymmetry represented in HIRDLS (more HNO<sub>3</sub> in SH)

# Global Comparisons

## July 21st (2005)

binned: 5° latitude; 20° longitude

More Enhanced HNO<sub>3</sub> in July

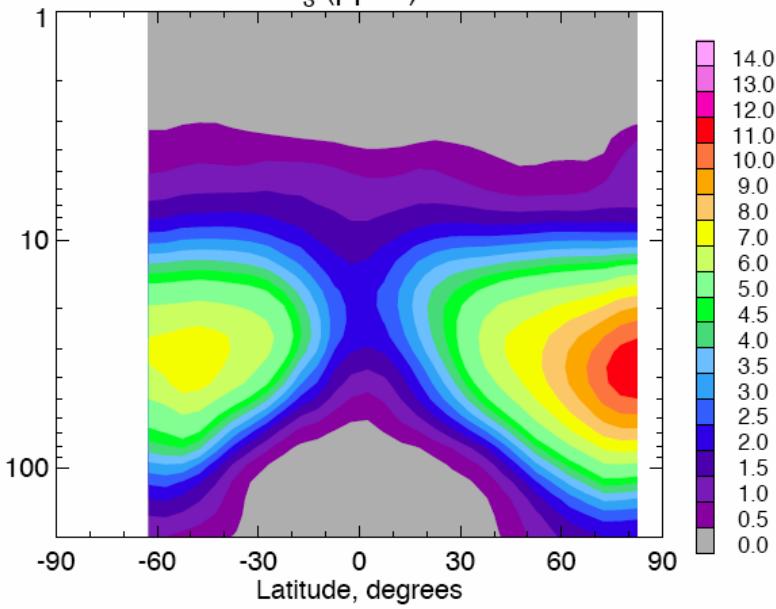

If real; Enhanced HNO<sub>3</sub> signal strong in HIRDLS

Correct Winter/Summer Asymmetry represented in HIRDLS (more HNO<sub>3</sub> in SH)

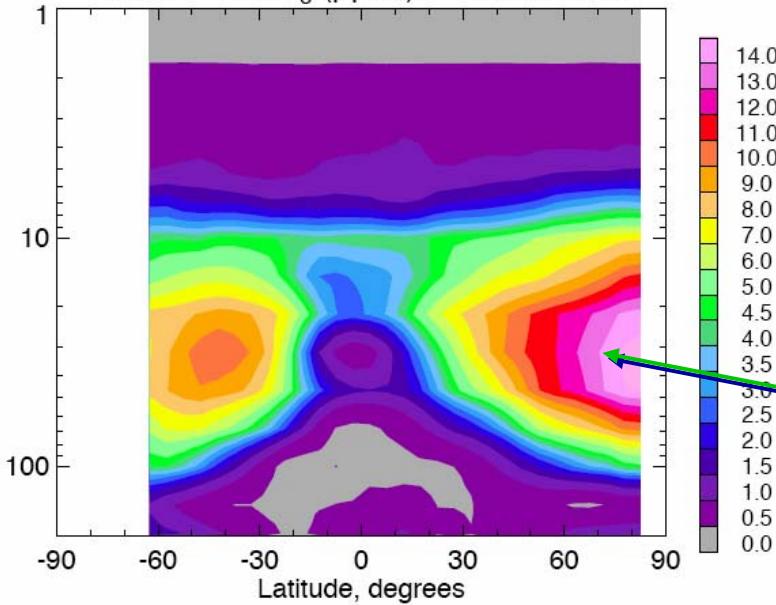

LIMS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 19781021

Pressure, hPa

MLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20051012

Pressure, hPa

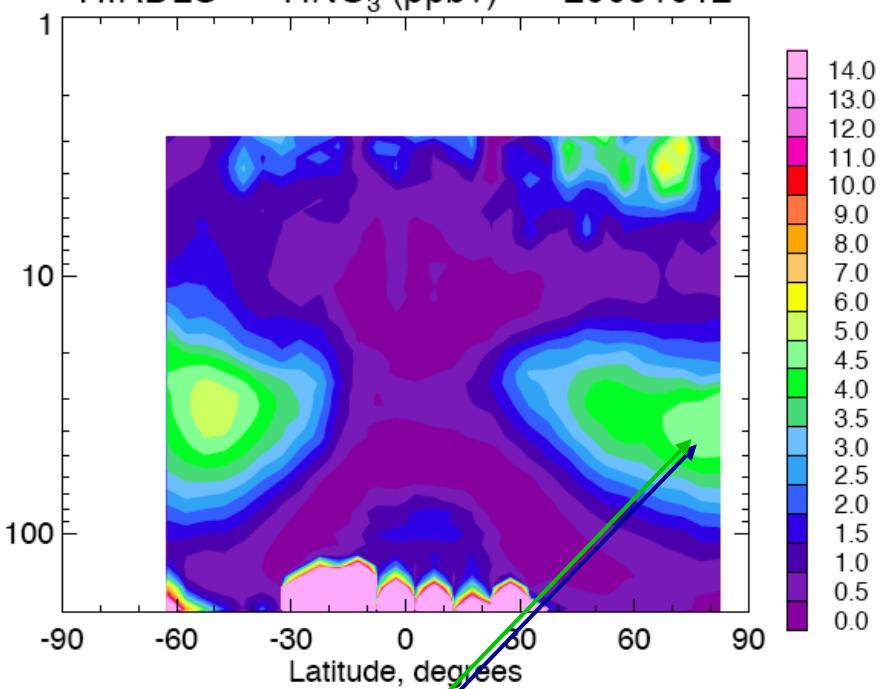

# Global Comparisons Oct 12<sup>th</sup> (1979; 2005)

binned: 5° latitude; 20° longitude

HIRDLS \*\*\* HNO<sub>3</sub> (ppbv) \*\*\* 20051012

Pressure, hPa

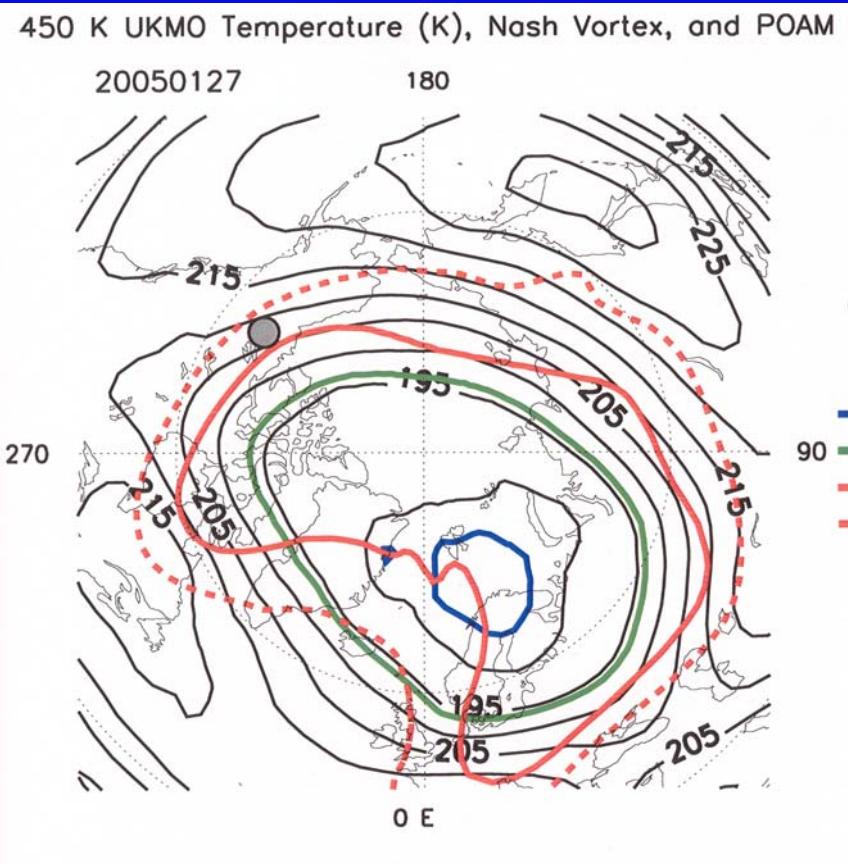

More asymmetry in MLS than HIRDLS

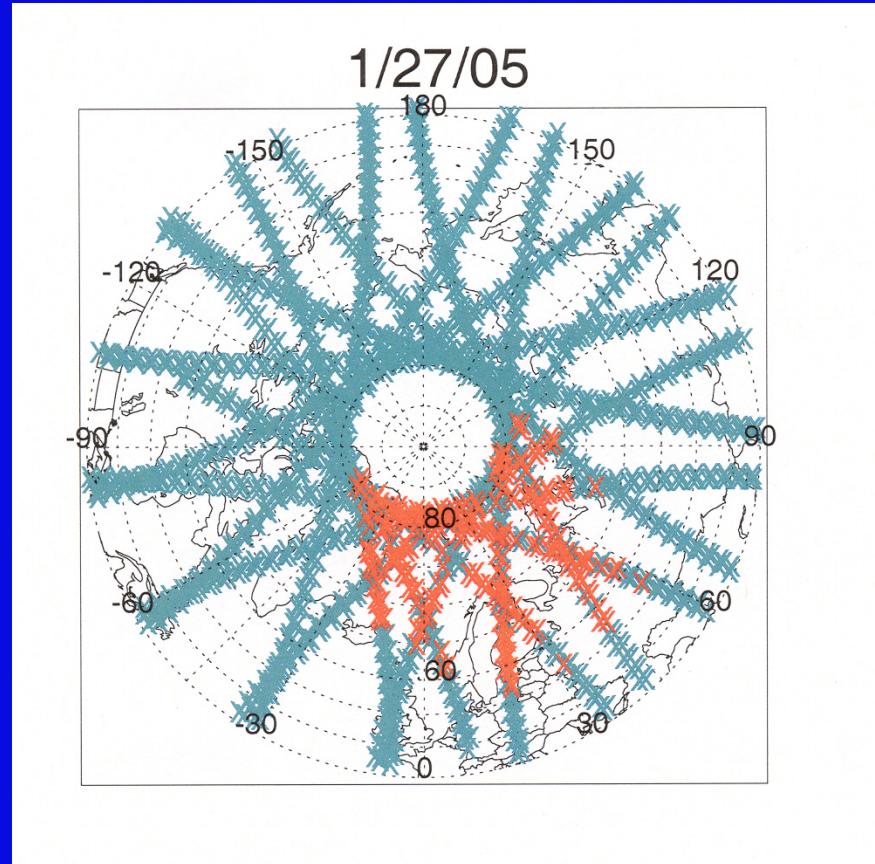

# Presentation Outline

- Profile Comparisons
  - Highlight biases
    - Validate with ACE data
- Global Features

# HIRDLS PSCs Observed in Cold NH Region

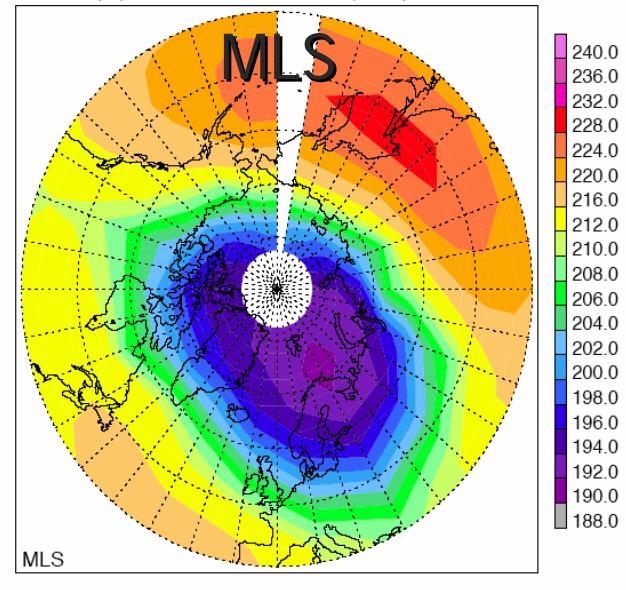

Polar vortex on 27 Jan – courtesy of the POAM group. The green contour marks the region of the 195 K PSC temperature threshold. The blue line marks the ice threshold (for PSC II ice particles). The red lines mark the polar vortex (by the Nash criterion).

Individual observations of PSCs by HIRDLS 27 Jan 2005. Red crosses are the locations of PSCs (as given by our cloud detection algorithm). Blue crosses are non-cloud observations. By comparing this graph, and the POAM graph, it is apparent that HIRDLS observes many PSC inside the T+195 K temperature contour.

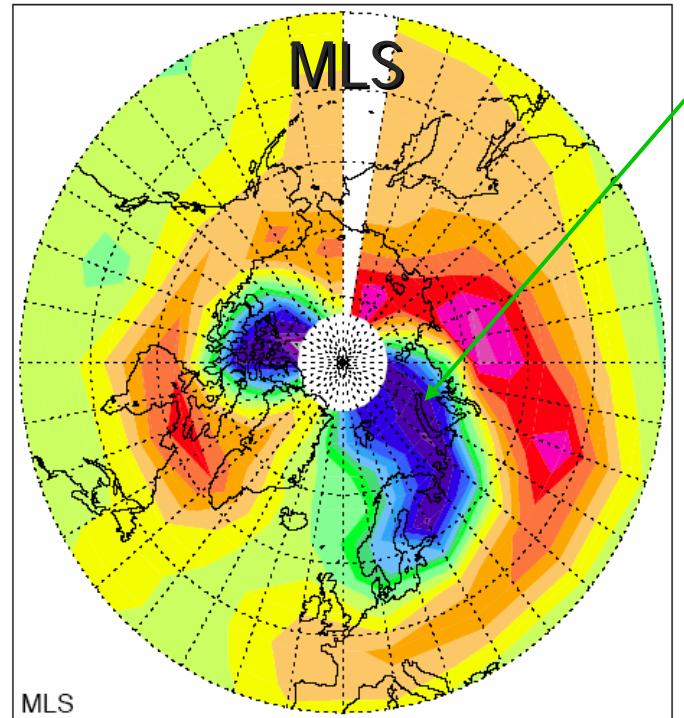

T (K) \*\*\* 20050127 \*\*\* P(hPa)= 56.2

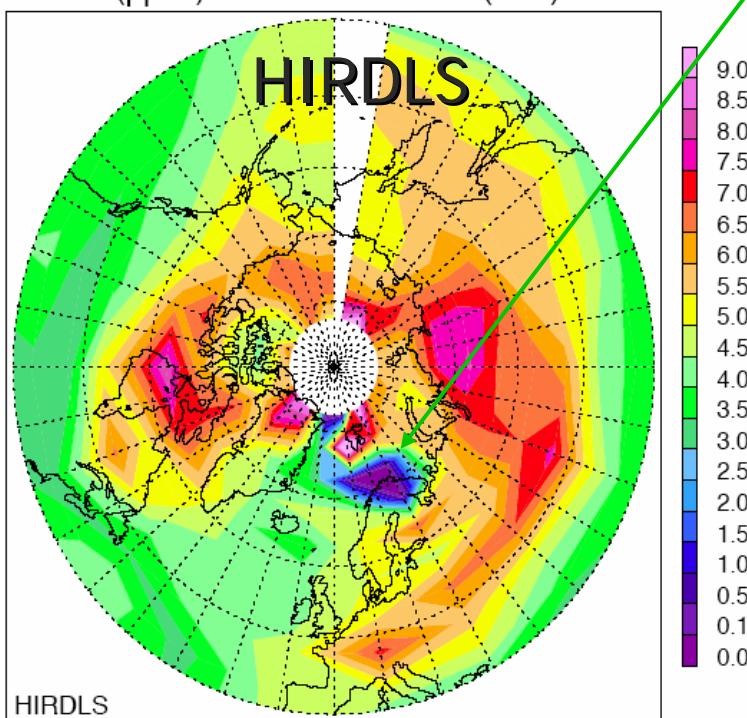

# De-nitrification in NH.

HIRDLS does not see the same low HNO<sub>3</sub> values that MLS observes.

HNO<sub>3</sub> (ppbv) \*\*\* 20050127 \*\*\* P(hPa)= 56.2

HNO<sub>3</sub> (ppbv) \*\*\* 20050127 \*\*\* P(hPa)= 56.2

Contour intervals  
adjusted to give same  
color contrast.

# Summary...

- Initial  $\text{HNO}_3$  results from HIRDLS look very promising.
- HIRDLS  $\text{HNO}_3$  profile comparisons with ACE show HIRDLS is biased low (approximately 3 ppbv at the peak).
- HIRDLS  $\text{HNO}_3$  is consistent with the global evolution of  $\text{HNO}_3$  relative to LIMS and Aura MLS.
- HIRDLS does not observe extensive NH de-nitrification (relative to MLS).

**The END**
